

TX-I/O™

Power supply module, bus connection module

TXS1.12F10
TXS1.EF10

- Each I/O row begins with one of these devices
- TXS1.12F10 power supply module
 - Up to 4 power supply modules can be operated in parallel
 - AC 24 V input
 - Generation / transfer of DC 24 V, 1.2A for the supply of TX-I/O modules and field devices
 - Fresh provision of AC 24 V for field device supply
 - Transfer of the bus signal
- TXS1.EF10 bus connection module
 - Transfer of DC 24 V for the supply of TX-I/O modules and field devices
 - Fresh provision of AC / DC 12 ... 24 V for field device supply
 - Transfer of the bus signal
- Compact format (to DIN43 880), small footprint
- Simple installation and easy access
 - Self-establishing bus connection for maximum ease of installation
 - Plug-in screw terminals
 - Fuse is accessible with device installed
- Easy, fast diagnostics

Technical and mechanical design

Overview

Key

- A Plug-in screw terminal ("1")
 1 CS DC 24 V supply for modules and field devices
 2 CD Island bus signal
- B Plug-in screw terminal ("3")
 3 24V~ Supply for supply module and Field devices (TXS1.12F10)
 V~ Field device supply (TXS1.EF10)
 4 ⊥ System neutral
 5 CS DC 24 V module supply
 6 CD Island bus signal
- C Fuse, T 10A for field supply
- D LED: "Field supply OK"
- E LED "DC 24 V module supply OK"
- F Bus connector (right) (with field device supply)
- G Bus connector (left) (no field device supply)
- H Bus connector cover
- I Slide fitting for standard mounting rail

Mechanical characteristics

Housing

- The housing complies with DIN 43880 and is 90mm wide.
- The plastic housing is provided with a large number of vents for cooling
- When mounting, allow for sufficient heat dissipation by convection (max. ambient temperature 50°C)

Electrical characteristics

TXS1.EF10 supply module)	<ul style="list-style-type: none"> • The supply module is supplied with AC 24 V. The tolerance range is $-10 \dots +20\%$. • The device generates a supply voltage of DC 24 V ("Module supply 24V=") for the modules and field devices, designed for a current rating of 1.2 A. • The power supply module is short-circuit proof. • Parallel operation is permissible as follows: <ul style="list-style-type: none"> – A maximum of 4 power supply modules can be operated in parallel – However, each I/O bar can accommodate a maximum of 2 power supply modules (see [3]) • To supply the field devices, the AC 24 V supply voltage is connected via a T 10A fuse to the island bus ("Field supply 24V~", maximum admissible current 6 A). <i>Note: for AC 24 V, the bus is interrupted to the left, the supply module can only supply the modules to the right with 24V~V.</i>
TXS1.EF10 bus connection module)	<ul style="list-style-type: none"> • To supply the field devices, an AC / DC 12 ... 24 V supply voltage is connected via a T 10A fuse to the island bus ("Field supply V\approx", maximum admissible current 6 A). <i>Note: for V\approx, the bus is interrupted to the left, the bus connection module can only supply the modules to the right with V\approx.</i>
Interfaces	<ul style="list-style-type: none"> • Plug-in screw terminals for supply voltage (24V~, V\approx, \perp) and island bus (CS, CD)
Island bus	<ul style="list-style-type: none"> • The I/O modules are mounted to the right of the supply module / bus connection module on the standard mounting rail. The electrical connection is established via the four island bus contacts on the side of the modules. The bus is created automatically when the TX-I/O™ devices are connected one next to the other on the rail. • For expansion purposes, the CS and CD signals of the island bus are also routed via terminals.
System ground	<ul style="list-style-type: none"> • The I/O modules and all connected field devices are connected to the same system ground (\perp). • The system ground of the I/O island (\perp) and of the automation station (G0) are electrically connected (in the P-Bus interface module)
Fuse	<ul style="list-style-type: none"> • In the event of overload or short circuit, the fuse (T 10A) cuts off the AC 24 V / V\approx field supply voltage (but not the supply module's supply voltage) • The fuse can be replaced without removing the device.
Protection against incorrect wiring	<ul style="list-style-type: none"> • All terminals are protected against shortcut and incorrect wiring with AC/DC 24 V • This is the case even for incorrect AC phase sequence • Bus connector on side: no protection • Voltage > AC/DC 24 V: no protection

LED indication

Fuse LED
for field supply
(TXS1.12F10 only)

Indicator for AC 24 V supply to supply module and field supply:

- ON AC 24 V (supply voltage) input present, and Fuse OK
- OFF No AC 24 V (supply voltage) input, or Fuse blown

Fuse LED
for field supply
(TXS1.EF10 only)

Indicator for field supply voltage V_{\sim} :

- ON V_{\sim} (field supply voltage) input present (> 22 V), and Fuse OK
Voltage <22V are not indicated!
- OFF No V_{\sim} (field supply voltage) input, or Fuse blown

Module supply LED
(CS conductor)

Indicates DC 24 V module supply / field supply:

- ON Module supply OK. *When other supplies are in the I/O island (CS >21.5 V) and AC 24 V is OK, the LED is also ON.*
- OFF Module supply voltage not OK
Reasons: no AC 24 V (supply voltage) input, or AC/DC converter faulty, or short circuit at DC 24 V connections (CS)

**Circuit principles
(TXS1.12F10 power supply module)**

STOP Note!

For AC 24 V, the bus is interrupted to the left, the supply module can only supply the modules to the right with 24V~V.

Circuit principles (TXS1.EF10 bus connection module)

Note!

For $V\approx$, the bus is interrupted to the left, the bus connection module can only supply the modules to the right with $V\approx$.

Disposal

The device is classified as waste electronic equipment in terms of the European Directive 2002/96/EC (WEEE) and should not be disposed of as unsorted municipal waste. The relevant national legal rules are to be adhered to.

Regarding disposal, use the systems setup for collecting electronic waste. Observe all local and applicable laws.

Engineering, mounting, installation and commissioning

[6] TX-I/O™ Engineering documentation V4	CM111001 ff

Engineering

The following information is required when designing the power supply for an I/O island (see [3]):

- Number and type of modules to be supplied
(Basic consumption of I/O module)
- Type and number of data points
(Consumption per configured data point)
- Type and number of field devices to be supplied from the field device supply

Mounting

Mounting	The module is mounted on a standard 35 x 7.5 mm mounting rail (top-hat rail type TH35-7.5 to EN60715)
Mounting sequence	An I/O row always starts on the "left" side with a device for power supply (power supply module, bus connection module, BIM, or automation station, see [3])
Replacement	A power supply module or bus connection module can be removed from the row of modules, but to do this, it is essential to remove the plug-in I/O unit from the adjacent module to the right. There is no need to remove the terminal base of this module.
Permitted orientation	The TX-I/O™ devices can be installed in any orientation: It is important to provide adequate ventilation so that the admissible ambient temperature (max. 50°C) is not exceeded.

Technical data

Operating voltage (24V~, ⊥)	Extra low voltage SELV or PELV in accordance with HD348 Half-wave load	AC 24 V, -10 ... +20% 50 ... 60 Hz Symmetrical
Power consumption TXS1.12F10	Without module and field device load With maximum admissible load DC 24 V / 1.2 A With maximum admissible load DC 24 V / 1.2 A + AC 24 V / 6 A	4 VA / 0.17 A 57 VA / 2.4 A 200 VA / 8.4 A
Power consumption TXS1.EF10	With maximum admissible load DC 24 V / 1.2 A With maximum admissible load DC 24 V / 1.2 A + AC/DC 24 V / 6 A	28.8 VA / 1.2 A 144 VA / 7.2 A
Protection against shortcircuit and incorrect wiring	Bus connector on side Terminals	No protection! See below
DC output (CS, ⊥)	Nominal voltage Max. current Can be connected in parallel (regulated output voltage) Short-circuit-proof, overload protected Excess temperature cutout Indication	DC 24V 1.2 A For details refer to [3] Self-resetting LED "24V="
AC output (24V~, ⊥) (TXS1.12F10 only)	Nominal voltage Max. current Fuse Indication	AC 24 V 6.0 A T 10A (replaceable) LED "24V~"
AC /DC output (V~, ⊥) (TXS1.EF10 only)	Nominal voltage Max. current Fuse Indication	AC / DC 12 ... 24 V 6.0 A T 10A (replaceable) LED "24V~"
Island bus communication	(CD, CS)	Short-circuit proof

Plug-in connection terminals	Mechanical design	Plug-in screw terminals
	Solid or stranded copper conductors with connector sleeves	1 x 0,6 mm \varnothing to 2.5 mm ²
	Stranded copper conductors without connector sleeves	or 2 x 0,6 mm \varnothing to 1.0 mm ²
	Screwdriver	1 x 0,6 mm \varnothing to 2.5 mm ²
		or 2 x 0,6 mm \varnothing to 1.5 mm ²
		Slot-headed screws
